

Sec 5

→ style

- resource defines the format and look for UI
- Can be applied to an individual view or to an entire activity or app.

→ xml resource

از این حرف ال style ؟

res/values/ فایله های آکس آنایز

لزام یکن جوال <resources>
← style ← لازم آه یله آکس آنایز آن حرف استفاده

- لما جی آن حرف حاجه جوال style
<item> د بیدیه آکس

- the value of the <item> can be a keyword, string, hex color, reference to another resource type or other value depending on the style property.

→ style inheritance is very much similar way as cascading style sheet in web design.

- you can use this to inherit properties from an existing style

→ theme

- is an android style applied to an entire activity or app.

android:theme

Sec 6

→ Animation

- is the process of creating motion and shape change.

→ tween animation

- takes some parameters → start value. → end value.
→ Size. → time duration.
→ rotation angle - etc...
- perform the required animation on that object.
- it can be applied to any type of object.

Static function ⇒ Load Animation()

- the second parameter → is the name of the our animation .xml file
- you have to create a new folder called anim under res directory and make an xml file under anim folder.

→ the functions of the animation

- start().
 - get Duration().
 - cancel().
 - set Duration (long duration).
 - end().
-
